HP05 Pattern
Directional Control Valves

Also refer to "Directional Valve Features, Selection and Operating Recommendations" (dynexdcvoperating.pdf)
VALVE DESCRIPTION

HP05 valves operate at pressures to 8000 psi (560 bar), 60% higher than most other conventional subplate mounted valves.

These compact sliding-spool valves provide true four-way control in a simple compact package. A range of actuators, spools, internal operators and electrical options provides design flexibility.

Low pressure drop is enhanced with the use of the Dynex standard subplate, which takes advantage of this valve’s special double tank port design.

For a description of spools, operators and application information, see dynexdcvoperating.pdf.

Mounting
Special HP05 pattern. Refer to page 4.

Actuator Options

Rated Flow
5 U.S. gpm (19 L/min) nominal. Flows to 25 U.S. gpm (95 L/min) are possible with some models. See “Valve Flow Capacity”.

Rated Pressure
8000 psi (560 bar).

Tank Port Pressure (Maximum)
Solenoid Actuated Models:
Standard, 1500 psi (70 bar);
High Pressure Option (“HT”), AC models, 2000 psi (140 bar);
DC models, 2500 psi (170 bar).
Hydraulic and air actuated models: 3000 psi (210 bar).

Flow Capacity – Solenoid Models

Flow Curve Reference

Response Time (Full Stroke)
Solenoid Energized:
AC, 10-20 ms; DC, 25-35 ms.
Spring Returned:
AC, 15-20 ms; DC, 30-40 ms.

Solenoid Options
Models are available with standard AC or DC solenoids. Optional Plug-In-Terminal Solenoids fit DIN Connector, Standard 43650 Form A (“Hirschmann” type).

Electrical Connections
Standard Wiring Box with UL listed and CSA approved wire leads;
Optional Terminal Strip, Cable Grip or Pin Connector (N.F.P.A. standard T3.5-29-1980; A.N.S.I. standard B93.55M-1981).

Explosion Proof Option (“EP”)
Solenoids with special enclosures are approved by UL and CSA for use in hazardous locations. Available with AC or DC solenoids.

UL Classification:
Class I, Group C, D;
Class II, Group E, F, G.

CSA/UL Recognized (“C” Option)
Solenoid coils are printed with the symbol:

UL Classification:

Class I, Group C, D;
Class II, Group E, F, G.

This option is available with “115DF” standard AC solenoids only. For availability with other voltages, contact the Dynex sales department.

VALVE FLOW CAPACITY

Flow capacity depends on valve actuator, internal operator and spool type.

Solenoid Models
The flow capacity curves, above, show typical performance for each internal operator and spool type. The letters in the “Flow Curve Reference” table identify the appropriate curve.
Pilot Operated Models
The nominal flow capacity for most pilot operated valves is 10 U.S. gpm (38 L/min).
Maximum flow for pilot operated valves is dependent on pilot pressure.

Minimum Pilot Pressure:
Hydraulic, 500 psi (35 bar);
Air, 75 psi (5 bar).

Maximum Pilot Pressure:
Hydraulic, 3000 psi (210 bar);
Air, 200 psi (14 bar).

Minimum Pilot Pressure:
Hydraulic, 500 psi (35 bar);
Air, 75 psi (5 bar).

Maximum Pilot Pressure:
Hydraulic, 3000 psi (210 bar);
Air, 200 psi (14 bar).

Required Volume (to shift spool full stroke):
Hydraulic, 0.014 in³ (0.23 cm³);
Air, 0.220 in³ (3.61 cm³).

Valve Efficiency
HP05 valves provide exceptionally low pressure drop, as shown in the performance curves. The values indicate typical performance using the Dynex standard subplate, which takes advantage of the valve’s special double tank port design.
Flow may be limited for certain spools. See “Flow Capacity” curves on page 2.

Determining Pressure Drop
The curves show typical resistance to flow for various spool types. The table identifies the proper pressure drop curve for each spool and flow path.

An Example
In the table under spool Type 1, curve “D” is called out to determine the pressure drop for P→A. Looking at the curves, “D” indicates a drop of about 28 psi at 12 U.S. gpm (1.9 bar at 45 L/min).
To determine total “loop” drop, the individual pressure drops for P→A and B→T (or P→B and A→T) must be added.
INSTALLATION AND DIMENSIONS

Special Valve Mounting
Although similar to standard N.F.P.A. D05 (CETOP 5) valves in size, HP05 valves require a special high pressure mounting pattern.

These valves have a second “T” port into a common tank passageway for lower pressure drop. The mounting surface drawing shows the HP05 pattern with the optional second “T” port.

Port o-rings are included with valves. Mounting bolts must be ordered separately: 0.3125-18 U.N.C. Threaded x 1.00 inch (24.5 mm), Grade 8 or better, four required. Recommended mounting torque is 25 lb-ft (34 N-m).

See “Subplate and Bolt Kits” on page 5.

Solenoid Model Dimensions
Dimensions are shown for both AC and DC solenoids. DC configuration is shown printed in gray.

The overall length of a single solenoid model (not shown) is 7.67 inches (194.8 mm) AC and 9.02 inches (229.11 mm) DC.

Weight (Mass):
Single Solenoid, AC, 8.1 lb (3.7 kg); DC, 9.5 lb (4.3 kg).
Double Solenoid, AC, 9.6 lb (4.4 kg); DC, 12.6 lb (5.7 kg).

Explosion Proof Solenoids
“EP” solenoids with special enclosures are approved by UL and CSA for use in hazardous locations.

Overall length of single solenoid models (not shown) is 9.31 inches (236.5 mm).

A kit with a spacer plate and bolts (part number KV00501066) is required when valves are mounted on manifolds, side outlet subplates or when used as a pilot valve.

Weight (Mass):
Single Solenoid, 15.7 lb (7.1 kg); Double Solenoid, 24.8 lb (11.2 kg).
Hydraulic Pilot Operated

Overall length of single actuator configuration (not shown) is 6.60 inches (167.6 mm).

Weight (Mass):
- Single Actuator, 7.1 lb (3.2 kg);
- Double Actuator, 7.8 lb (3.5 kg).

Air Piloted Models

Overall length of single actuator configuration (not shown) is 7.13 inches (118.1 mm).

Weight (Mass):
- Single Actuator, 8.0 lb (3.6 kg);
- Double Actuator, 9.5 lb (4.3 kg).
